

The exam can be taken in two ways:

- an oral dissertation
- development of a project.

Independently from the chosen modality, the student will also have to answer a couple of oral questions on the whole program, unless he or she has successfully completed the exercises during the course that are reserved to attending students.

To undergo the examination, the student must be enrolled in the Uniweb system and fill in the survey on moodle indicating the chosen modality. Both of these operations must be done at least five days before the exam date.

Oral modality:

Two days before the examination, the student will receive an email with two topics via the moodle system. He or she must choose one of the two topics and prepare an oral presentation with slides of about 15 minutes. This interval of time can be lowered according to the number of students enrolled in the oral examination. The email with the topics will also report the time schedule within which he or she has to communicate the chosen topic, usually within the day after, and within which to send the presentation, generally the morning of the oral examination.

Project modality:

The project must be accompanied by a report that describes its design and implementation choices. The report is very important because it explains, for example, the motivations behind the design of the interface.

Even students who choose this modality for the examination must sit an oral discussion about the project and any doubts that may arise during the reading of the report or the correction of the project.

If a big number of students are enrolled in the same oral examination, project discussions can be moved to the day after, and usually, traditional oral examinations will always take precedence over project discussions.

The projects must be delivered at least 5 days before the oral examination, if possible via email with a zip file containing the sources, the compiled application and the report. If the size of the zip file does not allow it, an agreement must be found on the delivery modality.
