Reactive Architecture: Distributed Messaging Patterns

Earners of this badge have demonstrated a comprehensive understanding of messaging in distributed systems. They can effectively compare synchronous and asynchronous messaging approaches, and apply the Saga pattern to manage distributed transactions. They understand the Two Generals Problem and different forms of delivery guarantees. Additionally, they are proficient in identifying and implementing various messaging patterns, including point-to-point and publish-subscribe, ensuring robust communication in distributed architectures.

Awarded on 11/29/2024
